

Dear Colleagues,

We are currently seeking applicants for admission to the International University Master Course on Science and technology for sustainable development in contaminated sites, at the University of Parma in Italy in cooperation with the Zhitomir State Technological University, Ukraine, and the University of Applied Sciences of Mittweida, Germany.

SUBSCRIPTIONS ARE OPEN UNTIL January 31st, 2008

The International University Master Course lasts one year. The project has been organised in order to fulfil the request of professionals in a field which is multidisciplinary and transnational. Since 2002 international students with various academic backgrounds and nationalities have subscribed to this course, which aims to providing students with the competence needed for:  
Elaboration of monitoring projects of the effects exerted by pollutants and contaminants  
Elaboration of projects for recovery and remediation of sites contaminated by polluting and contaminating substances  
Promotion of utilisation of technologies with low environmental impact adapted to specific fields of activity  
Promotion of the utilisation of environment-friendly technologies for waste disposal and residues  
Recognition of the conditions in landscape and environment in order to address the interventions on the territory.

We would appreciate if you could forward this information to students, colleagues or others who could be interested in the International Master Course.
